

Case 14

sections show fibrocollagenous and fibrofatty tissue containing dense inflammation, and a tumour with numerous slit like and dilated vascular spaces lined moderately pleomorphic cells.

I dont remember commenting on neurons.

There were mitotic figures but I cannot recall what I wrote.

Diagnosis

The features are of Angiosarcoma.
However the differentials

Additional work up

	CD31	CD34	ERG	FLI-1	AE1/3	HHV-8
Angiosarcoma	+	+	+	+	+/-	-
Kaposi sarcoma	+	+	+/-	-	-	+

Clinical comment

- Angiosarcoma is a high grade malignant soft tissue tumour.
- I will refer the case to the regional sarcoma unit for further assessment and work up.
