

### **CIN 3 WITH CONDYLOMA CERVIX**

**Microscopy:** Cervix shows CIN 3 along with an exophytic verrucous lesion with koilocytes suggestive of condyloma. No evidence of CGIN or invasive malignancy.

**Diagnosis:**

CIN 3 with Condyloma Cervix

**Further work:**

IHC: P16 positive.

2. HPV ISH or PCR.

3. Thorough sampling to exclude invasion.

4. Discuss at colposcopy MDT.

**Comment:**

1. CIN is asymptomatic precursor lesion to invasive carcinoma

2. Arises from transformation zone.

3. Condyloma is caused by HPV types 6, 11.
