

SARCOIDOSIS

DESCRIPTION: Lung shows interstitial and bronchovascular granulomas composed of epithelioid cells, Langerhan giant cells and lymphocytes. NO evidence of necrosis or malignancy.

DIAGNOSIS: Granulomatous inflammation, favour sarcoidosis

ADDITIONAL WORK:

- (1) Special stains: ZN stain (Tuberculosis)
PAS / Grocott (Fungi)
EVG stain (Wegner's)
- (2) Polarizing microscopy: Foreign body
- (3) Culture
- (4) PCR
- (5) Correlation with X Ray and serology
- (6) Discuss at MDT
